PROFESSIONAL SUMMARY

Computer Science (AI & ML) undergraduate with strong foundations in Data Structures & Algorithms, Object-Oriented Programming, DBMS, backend development, and machine learning. Experienced in building REST APIs and full-stack applications using C++, Python, Node.js, Express.js, React.js, MongoDB, Redis, and SQL.

EDUCATION

CMR Institute of Technology <i>B.Tech in Computer Science (AI & ML) — CGPA: 8.86/10</i>	Hyderabad, India 2023 – 2027
Sri Chaitanya Junior College <i>Intermediate – Science — 85%</i>	Hyderabad, India 2020 – 2022

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, SQL
AI & ML: Scikit-learn, Pandas, CountVectorizer, Classification, Ensemble Learning
Core CS: Data Structures & Algorithms, OOP, DBMS
Backend: Node.js, Express.js, REST APIs, JWT, RBAC
Databases: MongoDB, MySQL, Redis
Tools: Git, GitHub, Docker, Postman

PROJECTS

SkillForge – Personalized Learning Platform	<i>React.js, Node.js, Express.js, MongoDB, Redis</i>	GitHub	2026
- Built 15+ REST APIs for course creation, enrollment, progress tracking, course discovery, and learning management using Node.js and Express.js. - Implemented JWT authentication and role-based access control for students, instructors, and administrators. - Integrated Redis in-memory caching for frequently accessed course listings, reducing repeated database query load and latency. - Developed paginated course listing APIs with filtering and search capabilities for large course catalogs. - Designed MongoDB schemas, compound indexes, and a service-layer architecture to improve data access and maintainability.			
Deepfake Detection System	<i>Python, Django, Scikit-learn, Pandas, MySQL</i>	GitHub	2026
- Built a Django-based machine learning application to classify media records as FAKE or REAL using an ensemble Voting Classifier. - Trained classification pipelines on 22,900+ dataset records, utilizing CountVectorizer for textual and metadata feature extraction. - Combined Naive Bayes, Linear SVC, and Logistic Regression through soft voting for robust binary classification. - Integrated MySQL to persist prediction results and implemented prediction-history functionality for users. - Developed analytics dashboards to visualize prediction distributions and deepfake-ratio statistics.			
Backend E-Commerce System	<i>Node.js, Express.js, MongoDB</i>	GitHub	2025
- Engineered 20+ RESTful APIs covering product catalog, cart operations, user management, and order lifecycle management. - Implemented secure authentication using bcrypt password hashing and middleware-based authorization for protected routes. - Built role-based admin functionality for protected inventory and product-management operations. - Implemented token-based password reset with a 15-minute expiry for secure account recovery. - Designed modular routing, service-layer architecture, and Mongoose schemas with validation for products, users, and orders.			

ACHIEVEMENTS & CERTIFICATIONS

- Solved 1000+ DSA problems on LeetCode with a 1750+ rating, placing in the Top 9% globally, demonstrating strong problem-solving skills across Dynamic Programming, Graphs, Trees, and Greedy algorithms.
- Smart Coder Certification – Smart Interviews (2026) | [View Certificate](#)
